

TESTIMONIALS
for the RecoupAerator®
America's #1-rated Energy Recovery Ventilator

At the suggestion of our builder, I installed a **RecoupAerator®** in my open floor plan, a super-insulated rental, just after the framing and insulation were in. At the time, a propane radiant heater was being used, and moisture was forming on the lower windows. Almost as soon as we turned on the unit, the condensation disappeared.

We ran the **RecoupAerator®** during dry-walling, and it wasn't until we were ready to hook it up to the high-efficiency heat pump that the 'check filter' light came on. I easily removed the heat exchange material and replaced it with the spare set provided until I had time to wash the dry-wall dust out of the originals.

With the tightness of this house, the air would quickly become stale. The **RecoupAerator®** keeps the house fresh and clean. Even cooking odors don't linger. I am delighted with your product and the positive contribution it has made to the performance of our energy efficient house.

— Dave Palmer, Owner, WATH Radio Station, Athens, OH

I have chronic asthma and allergies, live in an older rental house, and had been noticing a stale feeling in the bedroom. Within an hour of installing your **RecoupAerator®** window unit I noticed a difference. I have more energy, less drainage, and the air is not so dry. It's been just fantastic. I will probably buy another window unit, and I look forward to purchasing a whole house unit when we are able to get our own home. Thanks.

— Amber Holmes, Minneapolis, MN

We initially got a **RecoupAerator®** because there was an air quality problem in the house. My daughter Caitlyn, who's only three, developed asthma as a baby. So I called up the Ohio Lung Association, who sent me to your site. There, I saw your chart comparing the **RecoupAerator®** to other units, and that convinced me. So I installed one of your HEPA-equipped ERVs. It's been two months and Caitlyn hasn't had any problems. Actually, all of us are sleeping better. It's also nice to have the variable speed your unit has and the high efficiency. It's as cheap as running a couple of light bulbs.

— Dan Auld, Columbus, OH

I want to drop you a line after having installed the SD-95 **RecoupAerator®** energy recovery ventilator system in my home. First off, I must tell you my home was built in 1993 and an air recovery system was installed. I was soon convinced that energy recovery was the way to go. My house never has a stale odor even after cooking. The problem was the manufacture and quality of my original unit. Because I live in lower Delaware, no one seemed to know anything about energy recovery and the manufacturer was not at all easy to get

information from. The other problem was it used expensive replacement filters and was noisy to operate. The topper was when I decided to replace all of the major parts before I sold my home. I was informed that the manufacturer no longer supplied parts for my unit.

After doing an Internet search for "energy recovery systems," I found Stirling Technology, Inc. On my first contact with your company I knew that I was dealing with a company that actually cared about its products and the people who were going to use them. Replacing my old unit with your unit was no problem and I can tell that your equipment is made to a higher standard. Now that it has been six months, I want to tell you that I could not be happier with the operation of my SD-95. It does everything my old unit did, but better and quieter.

Please let everyone in your Sales and Service Departments know that people do notice and appreciate their efforts. I want to assure you that when I build my new home, I will be installing a system from Stirling Technology.

— John A. Furbush, Rehoboth Beach, DE

Installing your **RecoupAerator**® has been a good experience. My two units do the job they were designed to do. I can go home now without the smell of smoke on my clothes. I believe your product will sell itself once you experience its usefulness. Maintenance has not been a problem, and I appreciate the design assistance and after-sale service your company has provided.

Being a web hosting service, we have racks and racks of computers running 24/7, which make the air in our server rooms and offices very stale. This air was so bad that before we started venting, anyone around for more than an hour or so would often end up with a headache.

We had to get rid of the excess heat and bad air, but venting it was causing bad problems with static electricity (very bad for us because static can cause errors or computer lockups), and also it created cold drafts and the furnace ran almost 100% of the time to heat all the air that had to be made up (leaking back in from doors, windows etc.).

Installing your unit so it takes the warm bad air out from our server rooms, and puts back clean warm air into the office space has helped tremendously. Static is less of a problem, and the unit puts back enough clean warm air to the office space that now the furnace almost never even runs.

Not only do we have better, cleaner air in the entire building, we have less static and are more comfortable. We also reduced our heating costs to almost nothing. Thanks again for a great product!

— Derek Shoemaker, EROS Technology Corporation, Athens, OH

Your **RecoupAerator**[®] saved my butt on several counts. The duplex rental unit that I built was extremely tight, so much so that the window condensation was forming icicles through the outside weep holes. My tenants were threatening to take me to court and my building was in the process of destroying itself. Your unit made a huge and immediate difference.

—George Kridler, Carpenter/Builder, Athens, OH

The **RecoupAerator**[®] was installed in my bedroom on October 30, 2001. I turned it down to a medium setting. I slept very well with the bedroom door closed.

The next morning I was surprised for I had not coughed during the night, hadn't used cough drops, my sinuses were not congested and there was no need to blow my nose several times as I usually did. My head was clear, I had no dull headache (which occurred regularly) and I felt GREAT! (remember, my bedroom was closed off from the remainder of the house).

Within 10 minutes of being in the rest of my house (unventilated) my "old" symptoms had returned. I sneezed numerous times, was congested and blowing my nose frequently and my head ached!! I needed my inhalers (Advair and Flovent) immediately. This continued for 4 days and I finally took the partition down between my bedroom and the rest of the house. The **RecoupAerator**[®] seems to work very well.

I visited a doctor November 15 and he was pleased with my condition. My lungs were clear, the congestion in my sinuses was much improved. And I felt GOOD! This has continued for three weeks and when I suffered a sinus infection I was able to recover in record time. During a sinus infection I take to my bed, so I spent all my 4 days with the benefits of my **RecoupAerator**[®] and antibiotics. There are details that are more specific such as breathing into a peak flow meter. The several days before my sinus infection, I was able to reach 430/440. Normally my meter at best reached 400/litres a minute at each use.

My breathing had improved when doing shopping and laundry and everyday chores. I was still short of breath when exerting myself but it was easier breathing during these times. I noticed while I was carrying several bags of groceries up my steps that I was breathing rapidly, but NOT panting or gasping. I carried about 10 bags and I did not have to stop and catch my breath. HOORAY! I have more energy and am able to be more active. I feel like it is a miracle. It is. It is fantastic.

—Barbara Ley, Athens, OH

We noticed the difference the very first day the units were turned on. Mold odors disappeared in one problem area. There was an improvement in the classroom where hamsters and reptiles are kept, as well as in isolated interior spaces without windows. Several parents also commented on the improvements. You have a very good product.

—Roger Wilkens, Director, River Valley Community School, Athens, OH

I suffer from chronic sinusitis and allergies. I bought a home in the woods, surrounded by trees and leaves and grass. I am allergic to all of them. The back of my house was damp. I felt it. I heard from my contractor about the **RecoupAerator**[®] when he was putting on my addition.

After it was in, the results were IMMEDIATE. I could feel the difference immediately in the constant fresh airflow through the house. There was a constant stream of fresh clean air. It made a world of difference in the way that I felt and feel. When I was working out of a leased office, I was in what I call a sick building. I asked the landlord to provide fresh air. Anything. I was getting sick. He didn't, of course. So I moved my office to my home.

If you have allergies, then the best thing you can do is get away from the problem. The **RecoupAerator**[®] definitely did that!

— Roy C. Whitmore, President, RC Whitmore Financial Advisors

We have had a **RecoupAerator**[®] window unit in place now for about three weeks. In the three weeks we have utilized it, I have been able to breathe more clearly through the night. (In the last three weeks I have not once woken up in the middle of the night with a weight on my chest from an asthma attack.) In part, I do feel that this is because of the quality of air I am breathing.

I am noticing a tremendous difference in my breathing during the day. I feel the **RecoupAerator**[®] ventilation unit is an excellent product that will aid in the asthmatics' health.

— Audrey Sprague, Athens, OH

I put wall-to-wall carpet in my basement, which is large, about 30 by 15 feet. The fumes were really bad in the whole house. Within 1 1/2 hours of putting a window unit in the upstairs, the noxious odors and fumes were gone, and I could smell fresh air instead of carpet. I never smelled that odor of new carpet again.

After the carpet installation, I left it on all the time. I love how refreshed it makes my house. I highly recommend the **RecoupAerator**[®] for everybody. My husband has this to add: "It is a great unit and I think it should be a requirement in all new houses and in all HVAC systems."

— Alice Cita and Dr. Randy Purdy, Athens, OH

The first thing I noticed was the definite difference in the quality and length of my sleep. It was unheard of for me to sleep as long as I did the first night I put in the **RecoupAerator**[®].

I woke up feeling much better and only then became aware of how bad it really was before. I could never fall asleep before 2 am before, when my body just conked out. That night I fell asleep at 10:30 pm and slept the night through without waking up to cough or sneeze.

— Renard Phillips, Athens, OH
